DevOps: A Software Architect's Perspective (SEI Series in Software Engineering) By Len Bass, Ingo Weber, Liming Zhu

The First Complete Guide to DevOps for Software Architects

DevOps promises to accelerate the release of new software features and improve monitoring of systems in production, but its crucial implications for software architects and architecture are often ignored.

In *DevOps: A Software Architect's Perspective*, three leading architects address these issues head-on. The authors review decisions software architects must make in order to achieve DevOps' goals and clarify how other DevOps participants are likely to impact the architect's work. They also provide the organizational, technical, and operational context needed to deploy DevOps more efficiently, and review DevOps' impact on each development phase. The authors address cross-cutting concerns that link multiple functions, offering practical insights into compliance, performance, reliability, repeatability, and security.

This guide demonstrates the authors' ideas in action with three real-world case studies: datacenter replication for business continuity, management of a continuous deployment pipeline, and migration to a microservice architecture.

Comprehensive coverage includes

- Why DevOps can require major changes in both system architecture and IT roles
- How virtualization and the cloud can enable DevOps practices
- Integrating operations and its service lifecycle into DevOps
- Designing new systems to work well with DevOps practices
- Integrating DevOps with agile methods and TDD
- Handling failure detection, upgrade planning, and other key issues
- Managing consistency issues arising from DevOps' independent deployment models
- Integrating security controls, roles, and audits into DevOps
- Preparing a business plan for DevOps adoption, rollout, and measurement

Editorial Review

About the Author

Len Bass is a senior principal researcher at National ICT Australia Ltd. (NICTA). He joined NICTA in 2011 after 25 years at the Software Engineering Institute (SEI) at Carnegie Mellon University. He is the coauthor of two award-winning books in software architecture—*Software Architecture in Practice, Third Edition* (Addison-Wesley 2013) and *Documenting Software Architectures: Views and Beyond, Second Edition* (Addison-Wesley 2011)—as well as several other books and numerous papers in computer science and software engineering on a wide range of topics. Len has more than 50 years' experience in software development and research, which has resulted in papers on operating systems, database management systems, user interface software, software architecture, product line systems, and computer operations. He has worked or consulted in multiple domains, including scientific analysis, embedded systems, and information and financial systems.

Ingo Weber is a senior researcher in the Software Systems Research Group at NICTA in Sydney, Australia, as well as an adjunct senior lecturer at CSE at the University of New South Wales (UNSW). Prior to NICTA, Ingo held positions at UNSW and at SAP Research Karlsruhe, Germany. His research interests include cloud computing, DevOps, business process management, and artificial intelligence (AI). He has published over 60 peer-reviewed papers, and served as a reviewer or program committee member for many prestigious scientific journals and conferences. Ingo holds a Ph.D. and a Diploma from the University of Karlsruhe, and an MSc from the University of Massachusetts at Amherst.

Liming Zhu is a research group leader and principal researcher at NICTA. He holds conjoint positions at the University of New South Wales (UNSW) and the University of Sydney. Liming has published over 80 peer-reviewed papers. He formerly worked in several technology lead positions in the software industry before obtaining a Ph.D. in software engineering from UNSW. He is a committee member of the Standards Australia IT-015 (system and software engineering), contributing to ISO/SC7. Liming's research interests include software architecture and dependable systems.

Users Review

From reader reviews:

Lawrence Scuderi:

Do you have favorite book? When you have, what is your favorite's book? Book is very important thing for us to know everything in the world. Each guide has different aim or goal; it means that publication has different type. Some people feel enjoy to spend their time and energy to read a book. They can be reading whatever they acquire because their hobby will be reading a book. Think about the person who don't like reading a book? Sometime, person feel need book when they found difficult problem or perhaps exercise. Well, probably you should have this DevOps: A Software Architect's Perspective (SEI Series in Software Engineering).

Young Legg:

As people who live in typically the modest era should be update about what going on or data even knowledge to make them keep up with the era which is always change and move forward. Some of you maybe may update themselves by examining books. It is a good choice to suit your needs but the problems coming to you is you don't know what type you should start with. This DevOps: A Software Architect's Perspective (SEI Series in Software Engineering) is our recommendation to help you keep up with the world. Why, because book serves what you want and want in this era.

Jennifer Buster:

Now a day people that Living in the era wherever everything reachable by connect to the internet and the resources inside can be true or not involve people to be aware of each details they get. How many people to be smart in getting any information nowadays? Of course the reply is reading a book. Looking at a book can help men and women out of this uncertainty Information specially this DevOps: A Software Architect's Perspective (SEI Series in Software Engineering) book because book offers you rich information and knowledge. Of course the information in this book hundred pct guarantees there is no doubt in it you may already know.

Gene Conley:

In this era globalization it is important to someone to acquire information. The information will make anyone to understand the condition of the world. The health of the world makes the information much easier to share. You can find a lot of references to get information example: internet, newspaper, book, and soon. You will observe that now, a lot of publisher this print many kinds of book. Typically the book that recommended to you is DevOps: A Software Architect's Perspective (SEI Series in Software Engineering) this reserve consist a lot of the information from the condition of this world now. This specific book was represented just how can the world has grown up. The words styles that writer require to explain it is easy to understand. The actual writer made some investigation when he makes this book. This is why this book ideal all of you.
