Machine Vision Algorithms and Applications By Carsten Steger, Markus Ulrich, Christian Wiedemann

This first up-to-date textbook for machine vision software provides all the details on the theory and practical use of the relevant algorithms.

The first part covers image acquisition, including illumination, lenses, cameras, frame grabbers, and bus systems, while the second deals with the algorithms themselves. This includes data structures, image enhancement and transformations, segmentation, feature extraction, morphology, template matching, stereo reconstruction, and camera calibration. The final part concentrates on applications, and features real-world examples, example code with HALCON, and further exercises.

Uniting the latest research results with an industrial approach, this textbook is ideal for students of electrical engineering, physics and informatics, electrical and mechanical engineers, as well as those working in the sensor, automation and optical industries.

Editorial Review

Review

"This is a very interesting, complete, and up-to-date book about various aspects of solving real-world machine vision problems. The opportunity to use and test the machine vision software HALCOM is also an important aspect of this book, allowing the reader to practice and develop machine vision solutions by using a very professional and complete software package." (*Computing Reviews*, January 21, 2009)

"This textbook for machine vision software not only covers the relevant algorithms in theory, but also figures out their practical use." (*openPR.com*, September 2008)

From the Back Cover

This first up-to-date textbook for machine vision software provides all the details on the theory and practical use of the relevant algorithms.

The first part covers image acquisition, including illumination, lenses, cameras, frame grabbers, and bus systems, while the second deals with the algorithms themselves. This includes data structures, image enhancement and transformations, segmentation, feature extraction, morphology, template matching, stereo reconstruction, and camera calibration. The final part concentrates on applications, and features real-world examples, example code with HALCON, and further exercises.

Uniting the latest research results with an industrial approach, this textbook is ideal for students of electrical engineering, physics and informatics, electrical and mechanical engineers, as well as those working in the sensor, automation and optical industries.

About the Author

Carsten Steger studied computer science at Technische Universität München (TUM) and received his PhD from TUM in 1998. In 1996, he co-founded the company MVTec, where he heads the Research and Development department.

He has authored and co-authored more than 60 scientific publications in the field of machine vision. Carsten Steger is also a guest lecturer at the Technische Universität München, where he teaches machine vision.

Markus Ulrich studied Geodesy and Remote Sensing at Technische Universität München (TUM) and received his PhD from TUM in 2003. Since 2003, he is a software engineer at the Research and Development department of MVTec. He has authored and co-authored scientific publications in the fields of photogrammetry and machine vision.

Markus Ulrich is also a guest lecturer at the Technische Universität München, where he teaches close-range photogrammetry.

Christian Wiedemann studied Geodesy and Remote Sensing at Technische Universität München (TUM) and received his PhD from TUM in 2001. He has authored and co-authored more than 40 scientific publications in the fields of photogrammetry, remote sensing, and machine vision. Since 2003, he is a software engineer at the Research and Development department of MVTec.

Users Review

From reader reviews:

Max Norris:

Hey guys, do you really want to find a new book to read? Maybe the book with the concept Machine Vision Algorithms and Applications suitable to you? The particular book was written by well-known writer in this era. The particular book titled Machine Vision Algorithms and Applications is the main of several books that everyone reads now. That book has inspired many people in the world. When you read this reserve you will enter the new dimension that you never knew just before. The author explained their thought in the simple way, and so all of people can easily know the core of this reserve. This book will give you a lot of information about this world now. To help you to see the represented of the world in this particular book.

Larry Swartz:

Reading an e-book can be one of a lot of activity that everyone in the world really likes. Do you like reading books thus. There are a lot of reasons why people love it. First reading a publication will give you a lot of new data. When you read a book you will get new information since a book is one of many ways to share the information or their idea. Second, reading through a book will make you actually more imaginative. When you read through a book especially a fictional book the author will bring one to imagine the story how the characters do anything. Third, it is possible to share your knowledge to others. When you read this Machine Vision Algorithms and Applications, you are able to tell your family, friends along with soon about your book. Your knowledge can inspire average, make them read an e-book.

Betty Williams:

Are you kind of a busy person, only have 10 as well as 15 minutes in your time to upgrading your mind talent or thinking skill possibly analytical thinking? Then you are receiving a problem with the book in comparison with can satisfy your limited time to read it because this all time you only find a publication that needs more time to be learned. Machine Vision Algorithms and Applications can be your answer since it can be read by you who have those short time problems.

Pearl Young:

Do you like reading a reserve? Confused to looking for your selected book? Or your book ended up being rare? Why so many queries for the book? But virtually any people feel that they enjoy regarding reading. Some people like reading through, not only science books but in addition novels and Machine Vision Algorithms and Applications or maybe other sources were given know-how for you. After you know how fantastic a book, you feel wish to read more and more. Science reserves were created for teachers or even students especially. Those guides are helping them to bring their knowledge. In various other cases, besides science e-books, any other book like Machine Vision Algorithms and Applications to make your spare time considerably more colorful. Many types of books like here.
