Research Methods for Science By Michael P. Marder

A unique introduction to the design, analysis, and presentation of scientific projects, this is an essential textbook for students in science and mathematics. The textbook gives an overview of the main methods used in scientific research, including hypothesis testing, the measurement of functional relationships, and observational research. It describes important features of experimental design, such as the control of errors, instrument calibration, data analysis, laboratory safety, and the treatment of human subjects. Important concepts in statistics are discussed, focusing on standard error, the meaning of p values, and use of elementary statistical tests. The textbook introduces some of the main ideas in mathematical modeling, including order-of-magnitude analysis, function fitting, Fourier transforms, recursion relations, and difference approximations to differential equations. It also provides guidelines on accessing scientific literature, and preparing scientific papers and presentations.

Editorial Review

Review

"The book is highly readable and well organized. This book should be of interest to any student who is considering a scientific field of study, in that it will provide both information on how to carry out and present various types of research, as well as knowledge of what science professionals must do to be successful in their work."

G.R. Mayforth, Computing Reviews

"Students would learn or reference many points of presentation or data handling if this book were on a shelf in the laboratory."

Wooil M. Moon, The Leading Edge

About the Author

Michael Marder is Professor of Physics at the University of Texas, Austin. He is co-director and founder of UTeach, a program to prepare secondary teachers of science and mathematics. He has been teaching a course on how to do scientific research which led to the writing of this textbook. He is author of the graduate text Condensed Matter Physics.

Users Review

From reader reviews:

Alberta Smith:

Book is to be different per grade. Book for children till adult are different content. To be sure that book is very important for people. The book Research Methods for Science ended up being making you to know about other information and of course you can take more information. It doesn't matter what advantages for you. The guide Research Methods for Science is not only giving you far more new information but also to get your friend when you feel bored. You can spend your own personal spend time to read your guide. Try to make relationship together with the book Research Methods for Science. You never really feel lose out for everything should you read some books.

Megan Martelli:

This Research Methods for Science are generally reliable for you who want to become a successful person, why. The reason why of this Research Methods for Science can be one of many great books you must have is definitely giving you more than just simple studying food but feed an individual with information that maybe will shock your preceding knowledge. This book is handy, you can bring it all over the place and whenever your conditions at e-book and printed kinds. Beside that this Research Methods for Science forcing you to have an enormous of experience including rich vocabulary, giving you demo of critical thinking that we realize it useful in your day pastime. So , let's have it and enjoy reading.

Ola Hellman:

Do you have something that you prefer such as book? The guide lovers usually prefer to choose book like comic, short story and the biggest one is novel. Now, why not seeking Research Methods for Science that give your satisfaction preference will be satisfied by reading this book. Reading behavior all over the world can be said as the method for people to know world far better then how they react when it comes to the world. It can't be claimed constantly that reading addiction only for the geeky person but for all of you who wants to become success person. So , for every you who want to start looking at as your good habit, you may pick Research Methods for Science become your personal starter.

Robert Bryant:

Many people said that they feel bored stiff when they reading a guide. They are directly felt it when they get a half regions of the book. You can choose the book Research Methods for Science to make your own personal reading is interesting. Your own skill of reading proficiency is developing when you including reading. Try to choose easy book to make you enjoy to read it and mingle the impression about book and reading especially. It is to be initial opinion for you to like to wide open a book and read it. Beside that the book Research Methods for Science can to be your new friend when you're feel alone and confuse with the information must you're doing of the time.
