## **Editorial Review**

Review

FROM THE REVIEWS:

### **IRISH ASTRONOMICAL JOURNAL**

"If the amateur astronomer were to follow this yearly observing progression they would surely build up a good knowledge of the basic objects of interest, throughout the year, and, in addition, would enjoy a well-written explanation of concepts necessary for a full enjoyment of the night sky...Overall the book admirably achieves three purposes; providing a basic year-long introduction to practical observing, presenting a good fireside read and acting as a good source of reference. It should seriously be considered by amateur astronomers embarking on their first observing adventure."

### **NEW SCIENTIST**

"The book is beautifully written and bubbles with enthusiasm. Moore is a superb personal tutor, and will convert a complete novice to skilled amateur astronomer within 12 months."

### **REVIEWS OF ASTRONOMICAL TOOLS**

"This volume is an interesting reading book to last for a few years for people with some interest in astronomy and things happening in the sky, but not knowing too much on the hard background of astronomy."

### **ASTRONOMY & SPACE**

"Well, Patrick Moore has done it again. What an excellent book this is. I was waiting for someone to write a book on observing the night sky for every night of the year and at last someone did just that...This is a book that I would not hesitate to tell everybody to buy it if they have any sort of interest in astronomy."

### **ASTRONOMY NOW**

"...this book is a little treasure trove of astronomical trivia, as well as being an entertaining read...it is a book that every amateur astronomer will find captivating to delve into."

From the reviews of the second edition:

"If you are attracted by the beauty of the night sky and would like to identify stars and planets or witness astronomic events, this book will help you ... . The book contains numerous tables of the stars and their characteristics in the main constellations ... . There are also many drawings ... that will help the observer to locate the constellations in the night sky. ... it may find a useful place on the bookshelves of any family or ... any amateur astronomy club." (Fernande Grandjean and Gary J. Long, *Physicalia*, Vol. 28 (4-6), 2006)

## THE OBSERVER'S YEAR *SECOND EDITION*

There are 365 nights in every year (366 in a leap year!) and from an amateur astronomer's point of view, no two are alike.

Using easy-to-follow star maps, he talks about the science and history of stars, double stars, galaxies, nebulae, the Moon, planets, constellations and even asteroids.
