## Precipitation Modeling and Quantitative Analysis (Springer Atmospheric Sciences) By Xiaofan Li, Shouting Gao

This book examines surface rainfall processes through cloud-resolving modeling and quantitative analysis of surface rainfall budget, and summarizes modeling and analysis results over seven years. Includes a set of diagnostic precipitation equations.

### **Editorial Review**

From the Back Cover

The book examines surface rainfall processes through cloud-resolving modeling and quantitative analysis of surface rainfall budget and summarizes modeling and analysis results in recent seven years. The book shows validation of precipitation modeling against observations and derives a set of diagnostic precipitation equations. The book provides detailed discussions of the applications of precipitation equations to the examination of effects of sea surface temperature, vertical wind shear, radiation, and ice clouds on torrential rainfall processes in the tropics and mid-latitudes, and to the studies of sensitivity of precipitation modeling to uncertainty of the initial conditions and to the estimate of precipitation efficiency. The book can be used as a text book for graduate students and will be beneficial to researchers and forecasters for precipitation process studies and operational forecasts.

Xiaofan Li is a physical scientist at the Center for Satellite Applications and Research, National Environmental Satellite, Data, and Information Service, National Oceanic and Atmospheric Administration, Camp Springs, Maryland, USA. He has a doctorate in meteorology from the University of Hawaii at Manoa, Honolulu, USA and a master's degree in meteorology from Nanjing University of Information Science and Technology, Nanjing, China.

Shouting Gao is a professor at the Laboratory of Cloud-Precipitation Physics and Severe Storm, Institute of Atmospheric Physics, Chinese Academy of Sciences, Beijing, China. He has a doctorate and a master's degree in meteorology from the Institute of Atmospheric Physics, Beijing, China.

### **Users Review**

#### **From reader reviews:**

#### **Charles Lee:**

A lot of people always spent their particular free time to vacation or go to the outside with them friends and family or their friend. Do you realize? Many a lot of people spent these people free time just watching TV, or perhaps playing video games all day long. If you wish to try to find a new activity that is look different you

can read a new book. It is really fun in your case. If you enjoy the book that you read you can spend 24 hours a day to reading a book. The book *Precipitation Modeling and Quantitative Analysis* (Springer Atmospheric Sciences) it is rather good to read. There are a lot of people that recommended this book. These people were enjoying reading this book. In the event you did not have enough space to bring this book you can buy the particular e-book. You can more very easily to read this book through your smart phone. The price is not very costly but this book has high quality.

**Matthew Dealba:**

Exactly why? Because this *Precipitation Modeling and Quantitative Analysis* (Springer Atmospheric Sciences) is an extraordinary book that the inside of the guide waiting for you to snap the idea but later it will distress you with the secret this inside. Reading this book alongside it was fantastic author who else write the book in such remarkable way makes the content on the inside easier to understand, entertaining way but still convey the meaning entirely. So, it is good for you because of not hesitating having this any longer or you going to regret it. This unique book will give you a lot of positive aspects than the other book have got such as help improving your proficiency and your critical thinking method. So, still want to hold up having that book? If I had been you I will go to the book store hurriedly.

**Shawn Hoffman:**

Beside this specific *Precipitation Modeling and Quantitative Analysis* (Springer Atmospheric Sciences) in your phone, it could possibly give you a way to get closer to the new knowledge or details. The information and the knowledge you can get here is fresh from your oven so don't be worry if you feel like an aged people live in narrow town. It is good thing to have *Precipitation Modeling and Quantitative Analysis* (Springer Atmospheric Sciences) because this book offers to you readable information. Do you sometimes have book but you rarely get what it's exactly about. Oh come on, that won't happen if you have this with your hand. The Enjoyable blend here cannot be questionable, similar to treasuring beautiful island. Use you still want to miss the idea? Find this book and also read it from now!

**Tracy Brown:**

A lot of e-book has printed but it is different. You can get it by internet on social media. You can choose the best book for you, science, amusing, novel, or whatever simply by searching from it. It is named of book *Precipitation Modeling and Quantitative Analysis* (Springer Atmospheric Sciences). You can include your knowledge by it. Without leaving the printed book, it may add your knowledge and make an individual happier to read. It is most important that, you must aware about e-book. It can bring you from one destination for a other place.
