Distributed Intelligent Systems: A Coordination Perspective By Abdellah Bedrouni, Ranjeev Mittu, Abdeslem Boukhtouta, Jean Berger

Distributed Intelligent Systems: A Coordination Perspective comprehensively answers commonly asked questions about coordination in agent-oriented distributed systems. Characterizing the state-of-the-art research in the field of coordination with regard to the development of distributed agent-oriented systems is a particularly complex endeavour; while existing books deal with specific aspects of coordination, the major contribution of this book lies in the attempt to provide an in-depth review covering a wide range of issues regarding multi-agent coordination in Distributed Artificial Intelligence.

Key features:

Unveils the lack of coherence and order that characterizes the area of research pertaining to coordination of distributed intelligent systems

Examines coordination models, frameworks, strategies and techniques to enable the development of distributed intelligent agent-oriented systems

Provides specific recommendations to realize more widespread deployment of agent-based systems

Editorial Review

From the Back Cover

Distributed Intelligent Systems: A Coordination Perspective addresses and comprehensively answers commonly asked questions about coordination in agent-oriented distributed systems. Characterizing the state-of-the-art research in the field of coordination with regard to the development of distributed agent-oriented systems is a particularly complex endeavour, as the space of available approaches is indeed considerable, and research is independently conducted in a great number of domains. While existing books deal with specific aspects of coordination, the major contribution of this book lies in the attempt to provide an in-depth review covering a wide range of issues regarding multi-agent coordination in Distributed Artificial Intelligence. In addition to reporting various sources of confusion, this book outlines the existence of a plethora of strategies and techniques adapted to different problems, agent-oriented systems, environments, and domains. In short, the current book identifies the absence of a single unified approach in addressing multi-agent coordination problems arising in any system or organization.

This book, written by world-class leaders in this field, dedicates itself to providing a state-of-the-art review of current coordination strategies and techniques. The book also describes a broad range of application domains which implement many of the coordination strategies and techniques from the field of multi-agent systems. The application domains include defense, transportation, health care, telecommunication and e-business. Based on current practical deployed applications and existing capabilities, this book also identifies and thoroughly examines trends, challenges, and future agent-oriented research directions.

Key features:

Unveils the lack of coherence and order that characterizes the area of research pertaining to coordination of distributed intelligent systems

Examines coordination models, frameworks, strategies and techniques to enable the development of distributed intelligent agent-oriented systems.

Provides specific recommendations to realize more widespread deployment of agent-based systems

Distributed Intelligent Systems: A Coordination Perspective is designed for a professional audience composed of practitioners and researchers in industry. This book is also suitable as a reference or secondary textbook for advanced-level students in computer science and engineering.

Users Review

From reader reviews:

Charlotte Gambrel:

Book is to be different for each grade. Book for children right up until adult are different content. As we know that book is very important for all of us. The book Distributed Intelligent Systems: A Coordination Perspective seemed to be making you to know about other information and of course you can take more information. It is extremely advantages for you. The reserve Distributed Intelligent Systems: A Coordination Perspective is not only giving you much more new information but also to get your friend when you experience bored. You can spend your current spend time to read your e-book. Try to make relationship while using book Distributed Intelligent Systems: A Coordination Perspective. You never really feel lose out for everything if you read some books.

Patrick Duenas:

Reading a reserve tends to be new life style in this particular era globalization. With reading through you can get a lot of information that can give you benefit in your life. Together with book everyone in this world could share their idea. Ebooks can also inspire a lot of people. Lots of author can inspire their very own reader with their story as well as their experience. Not only the story that share in the publications. But also they write about the knowledge about something that you need example. How to get the good score toefl, or how to teach your sons or daughters, there are many kinds of book that you can get now. The authors nowadays always try to improve their expertise in writing, they also doing some exploration before they write to their book. One of them is this Distributed Intelligent Systems: A Coordination Perspective.

Norma Ochoa:

A lot of reserve has printed but it differs from the others. You can get it by internet on social media. You can choose the best book for you, science, amusing, novel, or whatever by searching from it. It is known as of book Distributed Intelligent Systems: A Coordination Perspective. You can contribute your knowledge by it. Without leaving the printed book, it could add your knowledge and make anyone happier to read. It is most significant that, you must aware about guide. It can bring you from one spot to other place.

Wendy Hartnett:

A number of people said that they feel weary when they reading a book. They are directly felt the item when they get a half parts of the book. You can choose the actual book Distributed Intelligent Systems: A Coordination Perspective to make your own personal reading is interesting. Your own personal skill of reading talent is developing when you such as reading. Try to choose straightforward book to make you enjoy you just read it and mingle the idea about book and examining especially. It is to be first opinion for you to like to wide open a book and read it. Beside that the e-book Distributed Intelligent Systems: A Coordination Perspective can to be a newly purchased friend when you're really feel alone and confuse in what must you're doing of this time.
