Modeling and Analysis of Real-Time and Embedded Systems with UML and MARTE: Developing Cyber-Physical Systems (The MK/OMG Press) By Bran Selic, Sébastien Gérard

Modeling and Analysis of Real-Time and Embedded Systems with UML and MARTE explains how to apply the complex MARTE standard in practical situations. This approachable reference provides a handy user guide, illustrating with numerous examples how you can use MARTE to design and develop real-time and embedded systems and software.

Expert co-authors Bran Selic and Sébastien Gérard lead the team that drafted and maintain the standard and give you the tools you need apply MARTE to overcome the limitations of cyber-physical systems. The functional sophistication required of modern cyber-physical systems has reached a point where traditional code-centric development methods are proving less and less capable of delivering a reliable product in a timely manner. In *Modeling and Analysis of Real-Time and Embedded Systems with UML and MARTE*, you will learn how to take advantage of modern model-based engineering methods and corresponding industry standards to overcome these limitations. These methods take full advantage of computer-supported automation allowing timely detection of design flaws to reduce engineering risk, leading thereby to better overall product quality and greater productivity.

- Understand the design rationale behind the MARTE standard needed to take full advantage of its many powerful modeling capabilities
- Best apply the various MARTE features for the most common use cases encountered in the design of real-time and embedded software
- Learn how MARTE can be used together with the SysML language for the design of complex cyber-physical systems
- Discover how MARTE can be used for different kinds of computer-supported engineering analyses to predict key system characteristics early in development
- Customize MARTE for a specific domain or project

Editorial Review

About the Author

Sebastien Gerard is a CEA LIST senior researcher in software engineering and computer science. He graduated in 1995 from ENSMA (the Superior School of Mechanics and Aeronautics in Poitiers, France) as a mechanical and aeronautics engineer, after which he obtained a doctorate in computer science in 2000. He is currently leading a research team of about 20 engineers at CEA LIST (an arm of the French Atomic Energy Agency, http://www-list.cea.fr/gb/index_gb.htm) within the LISE (Laboratory for Model-based Engineering of real-time and embedded (RT/E) systems). The principal objective of this research of this team is to achieve "correct-by-construction" design of RT/E systems from requirements to implementation". Through his involvement in a numerous national and international research projects, Dr. Sebastien Gerard has worked with many industrial partners such as Peugeot Citroen, Airbus, ST Microelectronics, EADS, gaining extensive experience and insight into industrial problems and requirements. Dr. Sébastien Gérard is also deeply involved in various standardization activities, and is currently co-chairing both the UML 2 and MARTE (the UML extension for RT/E) standardization task forces. He is also core member of the European network of excellence, ArtistDesign (<http://www.artist-embedded.org>), where he is a prime on issues related to modeling and standardization. In addition, Dr. Sébastien Gérard is a member of the editorial board of the SoSyM journal, co-founder of the summer school on model-based development for DRES (<http://www.mdd4dres.info>) and a frequent member of program committees of major technical and scientific conferences (MODELS, ECRTS, ISORC, etc.).

Users Review

From reader reviews:

David Crockett:

Book is written, printed, or highlighted for everything. You can understand everything you want by a reserve. Book has a different type. We all know that that book is important issue to bring us around the world. Alongside that you can your reading proficiency was fluently. A publication Modeling and Analysis of Real-Time and Embedded Systems with UML and MARTE: Developing Cyber-Physical Systems (The MK/OMG Press) will make you to end up being smarter. You can feel a lot more confidence if you can know about everything. But some of you think which open or reading a new book make you bored. It is not make you fun. Why they may be thought like that? Have you seeking best book or ideal book with you?

Clara Lee:

The book untitled Modeling and Analysis of Real-Time and Embedded Systems with UML and MARTE: Developing Cyber-Physical Systems (The MK/OMG Press) is the guide that recommended to you to read. You can see the quality of the book content that will be shown to anyone. The language that creator use to explained their way of doing something is easily to understand. The writer was did a lot of investigation when write the book, so the information that they share for you is absolutely accurate. You also will get the e-book of Modeling and Analysis of Real-Time and Embedded Systems with UML and MARTE: Developing Cyber-Physical Systems (The MK/OMG Press) from the publisher to make you considerably

more enjoy free time.

Chris Barrentine:

Playing with family in a park, coming to see the marine world or hanging out with buddies is thing that usually you have done when you have spare time, in that case why you don't try matter that really opposite from that. A single activity that make you not experiencing tired but still relaxing, trilling like on roller coaster you have been ride on and with addition of knowledge. Even you love Modeling and Analysis of Real-Time and Embedded Systems with UML and MARTE: Developing Cyber-Physical Systems (The MK/OMG Press), you are able to enjoy both. It is excellent combination right, you still wish to miss it? What kind of hangout type is it? Oh can happen its mind hangout people. What? Still don't understand it, oh come on its named reading friends.

Cynthia Harvell:

Are you kind of occupied person, only have 10 as well as 15 minute in your day time to upgrading your mind skill or thinking skill perhaps analytical thinking? Then you have problem with the book when compared with can satisfy your short time to read it because all this time you only find publication that need more time to be study. Modeling and Analysis of Real-Time and Embedded Systems with UML and MARTE: Developing Cyber-Physical Systems (The MK/OMG Press) can be your answer because it can be read by a person who have those short free time problems.
